Making Logistics Easy

Cabka-IPS presents new product solutions at LogiMAT

The Cabka-IPS trade fair stand will play host to a series of new plastic transport solutions from March 14–16. They simplify logistical processes and are extremely economical.

Heilbronner half pallet: High volumes need quality

The Heilbronner is a cost-efficient and environmentally friendly alternative to the wooden Düsseldorf pallet. It was developed to be the future standard for production facilities with a high degree of automation. This innovative loading equipment has superior ergonomic handling and a long service life. Thanks to the latest RFID technology, warehouse staff and suppliers can easily track their shipments and in this way optimize their entire supply chain management.

CabCube 2.0: A class of its own

CabCube 2.0 is one of the many highlights: a collapsible large load carrier used by supply industries to make deliveries to production lines and warehouses. Thanks to its injection-molded production process, CabCube 2.0 impresses with robustness, dimensional accuracy, and high durability, differentiating itself in the marketplace where thermoformed products are common.

Euro E7: The best of both worlds

Press release

Page 2 of 3

Berlin, February 21, 2017

The Euro E7 brings together the best of two worlds as it offers the advantages of both wooden and plastic pallets. It was designed in a way that forklift pockets, deck height and blocks match the dimensions of an Euro-pallet. This allows for the seamless integration of the plastic pallets into storage and transport systems designed for handling standard wooden pallets. The low follow-up costs of the Euro E7 and the associated high profitability are another big plus for users.

Cabka-IPS at LogiMAT: hall 3, booth 3B31.

Illustrated materials:
