The Smart Solution for Transporting Bulk Bags

Reduces downtime and costs: the BigBag Divider by Cabka-IPS

With the new BigBag Divider, Cabka-IPS expands its portfolio of innovative product solutions. The BigBag Divider is a smart solution for transporting and storing flexible intermediate bulk containers. It was custom-designed for block stacking and with its smart design tailored to real-world applications, it circumvents the problems that are unavoidable with wooden pallets.

The main elements of the product are the four-sided fork shafts, which enable easy and safe stacking using a forklift. The tunnel design protects the bags from contact with the fork arms, which in turn can be retracted smoothly. Therefore, damage to the bags caused by fork arms – and thus long downtimes and increasing costs – is a thing of the past. Altogether, two layers can be stacked one on top of the other with a maximum carrying weight of 2500 kilograms in storage and 1500 kilograms during transport. At the same time, it is free of splintering and sharp edges and protects the bags stacked in this manner against abrasion and damage.

Depending on the field application, the BigBag Divider is offered in two different types of materials: Recycled PO - a low cost, alternative

to one way shipping -, and HDPE - best suited for returnable containers, logistical circuits and long-term use in warehouses.

An additional benefit: Its nestability, when empty, requires very little storage when in transit by truck or sea freight containers. Not only does it save on space, but it reduces CO2 emissions as well. And with bulk bags being a main solution for transporting and storing bulk goods, the BigBag Divider is the product to count on.
